Landscape architects are able to bridge diverse specialist disciplines. They will always have an added value because of that.

1705 **KEYNOTE DISCUSSION**

Moderator: Martin Joseph Barry • Founder & Director • reSITE • NYC

reSITE

is an international and collaborative platform to exchange ideas about making cities more livable and competitive. reSITE Festival and Conference highlights how contemporary, collaborative design can improve life in cities. reSITE was founded in 2011 by former Fulbright Scholar, Martin Barry. We are a non-profit organization based in Prague and New York.

reSITE AGENDA

Our core interest is in planning strategies that focus primarily on public space, waterfronts and urban mobility as a means to modernize a metropolis for modern citizens to compete regionally and globally. Simultaneously, we are interested in improving transparency, openness and quality in the planning and design process in Central and Eastern European cities. We organize workshops, design competitions, international conferences and a public festival with urban games, films, bike rides, discussions, workshops, competitions & public space interventions. We aim to catalyze social activity in cities in order to stimulate social action for public space. We have a long term goal to found primary and secondary level academic programs in landscape urbanism and urban planning.

CONFERENCE SUPPORT

PENTA is a Central European investment group founded in 1994, specializing in private equity and real estate in more than 10 markets across Europe. The Real Estate Division evolved into a strong Central European developer, implementing projects recognisable by superior architecture and high-quality structures. We are building attractive and sought-after residential, commercial and entertainment/leisure facilities for our clients.

PRAGUE INSTITUTE OF PLANNING AND DEVELOPMENT

The City Development Authority Prague (URM) is a budgetary organization. The City of Prague is the founder. Several activities carried by the organisation are: preparation and processing of strategic, urban and spatial development documents of the City of Prague; administration and maintenance of the city-wide land information system; administration and provision of the set of geodata on the territory of the City of Prague, mainly of the Digital Map of Prague; support of cooperation between the public and private sectors in the area of fulfilling the planning goals of the city; coordination of conceptual goals in the region.
